GSM-1+

4G Alarm Dialler

Simple, low-cost 4G alarm notification

The GSM-1+ is a compact and economical 4G alarm dialler for applications where only one alarm or fault input needs to be monitored.

When the input is activated it can send an SMS alarm message and/or make a telephone call to alert you to an alarm or equipment fault.

The GSM-1+ uses the 4G mobile network, so no landline, broadband or Wi-Fi connection is required.

Key Features

- 4G/LTE mobile network
- 1 alarm input (Normally Open or Normally Closed)
- SMS alarm notification
- Telephone call notification
- Custom alarm message
- Remote-control relay output
- Optional cloud/app facilities
- No landline or broadband required
- Compact and easy to install

Compact design with integral 4G antenna

Typical Applications

- Fire and intruder alarms
- Pump failure
- High or low water levels
- Refrigeration and freezer alarms
- Boiler and heating faults
- Generators
- Plant and machinery
- Agricultural equipment
- Remote buildings
- General equipment fault monitoring
